**GROUNDWATER SOLUTIONS INITIATIVE FOR POLICY AND PRACTICE (GRIPP)**

20 million people currently at risk of scarcity, adopt sustainable groundwater strategies.

Improve groundwater access for 4 million rural households and increase the irrigated land by 600,000 hectares in sub-Saharan Africa.

Help sustain groundwater-dependent ecosystems and their services to people.

Leverage over $1 billion of investments in Sub-Saharan Africa for sustainable groundwater irrigation.

Influence policy to bring about large-scale adoption of managed underground water-storage solutions.

Reduce by up to 10% the carbon footprint of Indian agriculture by promoting solar pumps for irrigation.

Share knowledge on groundwater management with over 200 key national and basin-scale water managers.

Create a knowledge hub on groundwater and food security to influence international negotiations on curbing over-exploitation of groundwater.

**THE GROUNDWATER CHALLENGE**

Groundwater use is soaring. It is being pumped at unprecedented rates for irrigation, industry, and urban development. As surface water supplies dwindle, we are now making withdrawals from our subterranean water bank that cannot be sustained. Groundwater is also increasingly being degraded because of human pollution. Both are damaging the environment and imperilling food supplies, jobs and health.

Yet in some regions, groundwater remains plentiful. If managed sustainably, it has the potential to boost agricultural production and lift millions out of poverty.

Climate change is likely to intensify our dependence on groundwater, so the need for solutions is becoming critical. Without coherent policies, attaining many of the UN’s Sustainable Development Goals (SDGs) will be challenging.

There is no one-size-fits-all approach. Never the less with new technologies, smart governance and community action, there is huge scope for progress.
JOIN THE GRIPP REVOLUTION

The GRIPP partnership, led by the International Water Management Institute (IWMI), will strengthen, expand and connect current groundwater initiatives. It will support the Global Framework for Action developed by the Groundwater Governance Project funded by GEF and implemented by the Food and Agriculture Organization of the United Nations (FAO) together with UNESCO’s International Hydrological Programme (UNESCO-IHP), International Association of Hydrogeologists (IAH) and the World Bank. Building on IWMI’s three decades of research, it will embed sustainable groundwater practices at the heart of natural resource management and the SDGs.

Join GRIPP to
- advance the agenda of sustainable groundwater management at a global scale to achieve the SDGs.
- be part of a network of partners with the critical mass to confront today’s groundwater issues for the benefit of future generations.
- assist with recording and dissemination of proven technologies and approaches.
- provide a platform for guiding groundwater research and management.
- capitalize on funding opportunities.

A GLOBAL VISION AND APPROACH

Many countries are adapting to groundwater issues and this provides a rich resource of knowledge for sharing and learning.

- MOROCCO
  Morocco has set clear targets and strategies for conserving its groundwater resources, while reducing demand for water by introducing efficient irrigation technologies.

- JORDAN
  Jordan is reducing its dependence on groundwater by importing more cereals, while strengthening water controls and law enforcement.

- CALIFORNIA, USA
  California’s Sustainable Groundwater Management Act is bringing together users for the first time to discuss and set sustainable limits and priorities for groundwater use.

- SUB-SAHARAN AFRICA
  In sub-Saharan Africa, groundwater use is currently limited. Carefully developed and well-managed groundwater use has the potential to relieve poverty through sustainable and equitable development for agriculture.

- INDIA
  Faced with overuse and overpumping of groundwater, India is revitalizing policies on supplying subsidized water to farmers with the dual aim of conserving groundwater and cutting energy footprints.

HOW WE WORK:

- CREATING LONG-TERM PARTNERSHIPS
  GRIPP reinforces and expands country-level and international partnerships. It supports national initiatives with capacity building, research, technical support, policy guidance and impact-monitoring activities.

- SCALING-UP SUCCESSES
  Based on solid documentation and rigorous assessments, GRIPP helps countries to replicate and scale-up proven approaches and technologies through long-term engagement.

- SHARING TRANSFERABLE SOLUTIONS
  GRIPP works with partners to document and disseminate lessons learned from groundwater management. It presents information in simple, easy to access formats for a variety of stakeholders.

- FILLING KNOWLEDGE GAPS
  GRIPP engages with knowledge providers to enhance understanding of critical practical and policy issues, while developing cross-disciplinary capacity teams and tools.
