

20 MARCH 2020 | CELEBRATING WORLD WATER DAY

Drought

A YOUTH CONFERENCE - LESSONS FROM THE WORLD
ON DEALING WITH DROUGHT IN THE NETHERLANDS

DROUGHT - MYTH OR A REALITY IN NL?

Introduction to droughts: what are they? do they really exist in the Netherlands? is it a threat?

WHAT CAN WE DO?

Activities and challenges to learn about and tackle drought. Learning from live cases overseas.

TAKE ACTION

About

IHE Delft Institute for Water Education and our partners* are pleased to invite you to join us for a lively afternoon of talks, competitions, and activities about **drought** – in the Netherlands and other countries. You may not have realized that each summer, as it gets hotter and drier, certain areas of the Netherlands are already experiencing **drought** and it's likely to get worse. Let's see if we can learn some lessons from countries where **drought** is a persistent problem (and is also getting worse).

We are inviting youth from schools, universities and water related organizations to meet to discuss this in IHE Delft. Please note that all sessions and activities will be in **English**.

You can [register online](#) or via our [website](#)

ArtSci contest

THEME: WATER & DROUGHT

What do art, water and science have in common? They all play a part in human development.

The **Water Youth Network** team of **YouKnow!** launched this first Art+Science for World Water Day 2019. It aimed to encourage youth to advocate for a water secure world through art. This time the ArtSci winners will be the judges of this edition.

Categories:

Photography and **free style drawings** (sketches, watercolour, oils, etc.)

Winners will be awarded by 2019 ArtSci winners and receive a **prize**.
